

IBRAHIM ISHAQ

SOFTWARE DEVELOPER / GAME PROGRAMMER

Vancouver, BC | +1(604)7865753 | ibrahimmiishaq@gmail.com | <https://ibrahimexe.github.io/>

About Me

Game Programmer & Software Developer with hands-on experience building interactive applications and game systems in **C++, C#, Unreal Engine, and Unity**. Experienced in engine development, graphics programming, UI systems, gameplay programming, and integrating third-party libraries and tools. With a background in 3D modeling, animation and VFX, I strive to attain polish with both technical and creative perspectives to a collaborative game development team and cycle.

Projects

IExeEngine | A custom game engine that can develop 2D or 3D games April 2025

- **Developed a custom game engine in C++**, working through compilation, linking, and through an engine's build pipeline.
- Integrated external elements, such as **DirectX 11** & the **Bullet physics engine**, to allow graphics rendering and in-engine physics.
- Implemented lighting-based shaders using **HLSL**.
- **GitHub:** <https://github.com/IbrahimExe/IExeEngine>

Bring the Balance | A 3D, RPG Simulation game built in Unreal for CVGM Aug 2026

- **Developed an educational interactive installation** for the Canadian Video Game Museum at the Centre for Digital Media as part of a 6-person development team.
- **Programmed gameplay and UI systems using C++ in Unreal Engine 5.6**, integrating Blueprints for rapid iteration and designer-facing functionality.
- Designed and **implemented a reusable C++ UI framework** to manage multiple game-state interfaces, UI interaction, input handling, animation, screen transitions and game-state-driven widget management that supports the turn-based RPG simulation designed for a museum environment.
- Collaborated with another developer teammate using **GitLab** for version control.
- **Project:** <https://thecdm.ca/projects/revealing-art-balance-canadian-video-game-museum>
- **GitHub:** <https://github.com/IbrahimExe/BringTheBalance>

De-File | A 2D physics-based puzzle game made in week inside Unity Feb 2026

- **Developed a 2D physics-based puzzle game in Unity and C#** within a one-week development period for the 2026 Global Game Jam.
- Implemented a custom particle-based simulation and obstacles in a 2D environment.
- **Designed and programmed the game's UI systems**, including menus, objectives, effects, and interactive buttons.
- **Play:** <https://ibrahimexe.itch.io/de-file>
- **GitHub:** <https://github.com/Ghuztavo/De-File>

Education

Bachelor of Science – Game Programming | LaSalle College Vancouver

2023 - 2026

Understand how game programming works through the learning of fundamental computer science concepts, as well as various languages covering C, C++ and C# fundamentals, and gained familiarity with multiple game engines (Unreal, Unity, GameMaker).

3D Design & Visual Effects Diploma | Vancouver Film School

2022 - 2023

Learned the 3D pipeline, including modeling, animation, VFX and compositing, through software such as Autodesk Maya, Foundry Nuke.

Foundation Visual Arts & Design Diploma | Vancouver Film School

2021 - 2022

Gained familiarity with the foundation of design and art through the Creative Adobe Suite.

Skills & Softwares

- **Game Engines:** Unity, Unreal Engine 5, GameMaker
- **Programming Languages:** C++, C#, Python, Kotlin, GameMaker Language, HLSL
- **Adobe:** Illustrator, After Effects, Photoshop, Premiere Pro, Substance Painter
- **Software:** Autodesk Maya, Blender, Foundry Nuke, GitHub/ GitLab/ Git

Hobbies & Interests

- Soccer/ Football, Gaming, Videography, Visual Effects, 3D Animation, Comics

Volunteering

- **Canadian Video Game Museum:** Guided visitors through Canadian, and specifically Vancouver's, video game development history at the Museum of Vancouver pop-up exhibition.
